

KHUBAIB AMJAD

Backend Developer (Java / Spring Boot) • Lahore, Pakistan
+92-333-2220523 | khubaib.amjad2002@gmail.com | linkedin.com/in/khubaibamjad | github.com/khubaibamjad

PROFESSIONAL SUMMARY

Backend Developer building REST APIs, JWT-secured services, and relational data models in Java and Spring Boot. Background in test automation (Selenium, Appium, Rest Assured, Jenkins CI/CD) brings a strong instinct for reliable, well-tested backend code. Experienced with Spring Data JPA/Hibernate, MySQL, Docker, and Git.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, JWT Authentication, Spring Data JPA/Hibernate, REST API Development, Maven
Databases: MySQL, SQL, H2
DevOps & Tools: Docker, Docker Compose, Git, GitHub, Jenkins (CI/CD)
Testing: Rest Assured, Postman, Selenium, Appium, UiAutomator2, JMeter, TestNG, SDLC, STLC, Agile
Other: Python, JavaScript, C++, HTML5, CSS3, Flutter/Dart

WORK EXPERIENCE

- SDET Engineer — Jeeny**

March 2026 – Present

 - Built and maintained API test suites in Java with Rest Assured, integrated into Jenkins CI/CD pipelines to catch regressions before release.
 - Restructured the entire manual test run, rebuilding the test case suite and execution process into a repeatable, documented regression cycle used every release.
 - Automated mobile application testing with Appium, UiAutomator2, and Java-based Selenium, identifying major UI and functional defects prior to release.
- Software Developer — Texaxis (SMC-Private) Ltd, Lahore–Karachi**

August 2024 – October 2025

 - Built internal business software in Java and Spring Boot, including an accounting application, working across REST endpoints, data models, and relational database design.
 - Developed a responsive company website in HTML, CSS, and JavaScript, with GitHub Pages CI/CD and linting rules for error-free deployments.
- Automation Engineer — Vertex**

October 2025 – March 2026

 - Tested an Electron desktop application across builds, combining manual and automated coverage to identify functional and UI defects.
- Web Developer / QA — Property Management Company (Remote)**

May 2023 – July 2023

 - Built responsive web applications in HTML5, CSS3, and JavaScript, and implemented RESTful APIs connecting front-end interfaces to backend services.

PROJECTS

- E-Commerce REST API**

Java, Spring Boot, Spring Security, MySQL, Docker

 - Built 18 REST endpoints across four controllers — authentication, products, categories, orders — covering full CRUD, keyword search, and category filtering, on a layered controller–service–repository architecture with 9 DTOs and Jakarta Bean Validation.
 - Secured the API with stateless JWT authentication (BCrypt hashing, custom Spring Security filter chain), leaving only register and login public, and enforced per-user ownership so users can only read and cancel their own orders.
 - Modelled Users, Products, Categories, Orders, and OrderItems in Spring Data JPA/Hibernate so orders persist with their line items in a single transaction; centralized error handling with @ControllerAdvice for consistent payloads and status codes.
 - Migrated persistence from H2 to MySQL, containerized app and database with Docker Compose for one-command deployment, and verified every endpoint with Postman and Rest Assured.
- Mobile Trading Application (Final Year Project)**

July 2024 – July 2025

 - Built a mobile trading application in Flutter/Dart, integrating the CoinGecko API for live charts and Firebase for authentication and data storage.

EDUCATION

Bachelor of Software Engineering — University of Central Punjab, Lahore Oct 2021 – July 2025
Major: Programming & Development | Minor: Business | CGPA: 3.09
