SUMMARY

Java Backend Engineer building REST APIs, Spring Boot services, JWT-secured applications, and relational data models. 2+ years of software development and test automation experience across Java, Spring Boot, microservices, Kafka, Redis, PostgreSQL, MongoDB, Cassandra, MySQL, JPA/Hibernate, Docker, and Git. Experienced in backend architecture, API development, database modeling, authentication, automated testing, and CI/CD, with a strong focus on reliable production-ready services.

TECHNICAL SKILLS

- Backend: Java, Spring Boot, Spring Security, Spring Data JPA/Hibernate, REST API Development, Microservices, JWT Authentication, Maven
- Databases & Messaging: PostgreSQL, MySQL, MongoDB, Cassandra, Redis, Kafka, SQL, H2
- DevOps: Docker, Docker Compose, Git, GitHub, Jenkins (CI/CD)
- Testing: Rest Assured, Postman, Selenium, Playwright, Appium, UiAutomator2, JMeter, TestNG
- Other: Python, JavaScript, C++, HTML5, CSS3, Flutter/Dart, Agile/Scrum, SDLC, STLC

EXPERIENCE

Jeeny | March 2026 – Present

SDET Engineer (Backend Development & Test Automation)

- Contribute to backend development of the Earnings Dashboard, working across Java microservices with Kafka, Redis, Cassandra, MongoDB, and PostgreSQL.
- Build and maintain Java-based API test suites and unit tests with Rest Assured, integrated into Jenkins CI/CD, covering 30+ endpoints per sprint.
- Automate mobile application testing with Appium, UiAutomator2, and Java-based Selenium, surfacing 8+ major UI/functional defects per release before production.

Vertex | October 2025 – March 2026

Software Engineer (Backend Development)

- Developed the Java/Spring Boot backend for Vstellar, an in-house test-automation product.
- Integrated Playwright and Java Selenium libraries into Vstellar, driving automated UI test execution and cutting manual test setup time by roughly 35%.
- Wrote unit tests for the Vstellar backend and collaborated with the DevOps team on build and deployment processes.

TEXAXIS (SMC-Private) Ltd, Lahore-Karachi | August 2024 – October 2025

Software Developer

- Built internal finance and accounting software in Java and Spring Boot, including REST endpoints, data models, and relational schema, used by 50+ daily users.
- Developed the company website in HTML, CSS, and JavaScript, and configured GitHub Pages CI/CD with linting rules for 20+ error-free deployments.

BACKEND PROJECTS

E-Commerce REST API

Java • Spring Boot • Spring Security • MySQL • Docker

- Built 18 REST endpoints across authentication, products, categories, and orders with full CRUD, keyword search, and category filtering using a layered Controller-Service-Repository architecture, 9 DTOs, and Jakarta Bean Validation.
- Secured the API with stateless JWT authentication, BCrypt hashing, and a custom Spring Security filter chain, leaving only register and login public.
- Modeled Users, Products, Categories, Orders, and OrderItems with Spring Data JPA/Hibernate, persisting orders with their line items in a single transaction.
- Migrated persistence from H2 to MySQL, containerized the app and database with Docker Compose, and verified every endpoint with Postman and Rest Assured.

Distributed Rate Limiter (Spring Boot Service)

Java 21 • Spring Boot 3 • Redis • Lua

- Built a Redis-backed token-bucket rate limiter so limits hold correctly across multiple load-balanced instances.
- Eliminated the check-then-act race by running refill-check-deduct as one atomic Lua script via Redis EVALSHA, with per-client buckets and a 1-hour idle TTL.
- Externalized rate limits through Spring Boot @ConfigurationProperties for configuration without code changes.

Mobile Trading Application — Final Year Project

Flutter/Dart • Firebase • CoinGecko API

- Built a mobile trading application integrating the CoinGecko API for live charts and Firebase for authentication and data storage.

EDUCATION

University of Central Punjab, Lahore | October 2021 – July 2025

Bachelor of Software Engineering — Major: Programming & Development | Minor: Business | CGPA: 3.09/4.0
